(3) Colocation and POP

We provide B2B CoLo and POP solution using our channel partner services like Gigenet, DataPlugs or Ctrl Server etc . One Stop Shop to our clients for both Co-Lo and POP which reduce time for setup and increase efficiency.

(4) DID Numbers

Direct Inward Dialing (DID) is a telecommunications feature that allows external callers to directly reach an extension within a private branch exchange (PBX) or a voice over IP (VoIP) system without going through a receptionist or an automated attendant.

- **Here's how it works**

Assignment of DID Numbers: Each employee or department is assigned a unique DID number, which corresponds to their extension within the organization's phone system. External Caller Dials DID Number: When an external caller dials the DID number of a specific employee or department, the call is routed directly to that extension without needing to go through a central switchboard or receptionist. Call Routing: The PBX or VoIP system uses the DID number to identify the destination extension and routes the incoming call accordingly. Direct Connection: The call is directly connected to the designated extension, allowing the recipient to answer the call immediately, bypassing any intermediary steps. DID offers several benefits for organizations.

- **Efficiency**

By enabling direct connections between external callers and internal extensions, DID streamlines the call handling process and reduces the need for manual call routing. Improved Customer Experience: External

callers can reach their desired contacts more quickly and easily, enhancing customer satisfaction and responsiveness. Flexibility: DID numbers can be easily assigned, modified, or reassigned as needed, providing flexibility to accommodate changes in organizational structure or staffing. Overall, DID is a valuable feature in telecommunications systems, facilitating efficient communication and enhancing the accessibility of employees within an organization.

(5) BPO Functionality

Our core services include social marketing, digital marketing, network monitoring, accounting functionality and quality assurance testing. We have a team of experts in all the defined areas and we are committed to use updated industry tools to carry out the BPO functionality for our client. Our core values are accuracy and timely response to our client.

(6) Support and Maintenance

Our enhanced support services help ensure that client services are kept up-to-date.

24 hrs Customer support

Contract based Annual maintenance

(7) SMS Marketing

SMS marketing, also known as text message marketing, is a form of digital marketing that involves sending promotional messages, alerts, notifications, and other types of content to a targeted audience via SMS (Short Message Service) or text messages on mobile phones. This marketing strategy leverages the popularity and convenience of mobile devices to reach customers and potential customers directly.

- **Why choose SMS Marketing for your business?**

With an open rate of 98%, it is highly unlikely that your messages would go unnoticed.

The other obvious benefit of bulk SMS marketing relies in the fact that it allows a large audience to be directly reached by businesses efficiently. So, not only can you be sure that you will reach your target audience but, you'll also have the certainty that your message has been seen.

- **Proof that SMS Marketing is as powerful as it seems**

There are many statistics showing the effectiveness of SMS marketing and just how efficient it can be in reaching its goal. Among the pool of statistics, here are the ones we found to be most prevalent

With customers preferring to receive updates regarding brands 22% via email, 20% via app notifications and only 8% via direct mail, they preferred SMS marketing with a whopping 48%.

When compared to the 20% of emails opened and read by customers, the 98% of SMS opened provides further proof that SMS marketing stands much superior to email marketing.

Marketing campaigns sent via text message have an astounding read and response rate of 95%.

75% of customers prefer offers being sent via SMS as it is the most convenient way of receiving information.

(8) IoT (Internet of things)

IoT (Internet of Things) services refer to the suite of technologies, platforms, and solutions that enable devices and objects to connect, communicate, and exchange data over the Internet. These services play a crucial role in creating smart environments, improving efficiency, enhancing decision-making, and enabling new business models.

With IoT, traffic is adaptive, meaning peak periods can be addressed dynamically without long term commitments.

- **Devices and Sensors**

Explanation of IoT-enabled devices and various types of sensors used for data collection.

- **Connectivity**

Discussion on communication protocols (MQTT, CoAP, HTTP, etc.) and networking technologies (5G, LPWAN, Wi-Fi, etc.).

- **Data Processing**

Overview of edge computing and cloud computing for data processing and analysis

- (9) **Design and Development**

After putting together a variety of effective tactics, we create a user-friendly website for our customers. Our talented web designers craft a faultless architecture and effective navigation for your website.

The talented website designers and developers at Paragon are skilled. They regularly receive training from various seminars, groups, forums, and webinars, so they have a good understanding of technical web terminologies, tools, and technologies. Our knowledgeable staff takes the time to clearly explain everything to each client. In addition to building websites, we provide our clients with a variety of other services, like SEO, content production, social media marketing, site management, coding, perceptible designing, layouts, and much more. We provide simple, static, dynamic, and interactive websites.

- **We are specialists in Shopify/WordPress CMS Website Design & Development**

We set businesses up for online success. We can tailor you a bespoke web & digital marketing package that marries your business growth ambitions with your functionality requirements and budget.

- **Get More Online Revenue With Our E-Commerce Solutions**

With our vast experience in this field, we implement all those methodologies that turn fruitful for fast navigation, smooth order processing, easy payment sending and receiving options worldwide.

eSIM

Travel eSIM – Seamless Connectivity, Anytime, Anywhere

Welcome to the future of global connectivity! Our Travel eSIM service offers seamless communication and internet access across 130+ countries, making your travels stress-free. With our digital eSIM, you'll never need to worry about buying or changing physical SIM cards again.

Boundless Data: Access extensive data packages in various global destinations without limits

Zero Roaming Costs: Travel worry-free and stay online without any extra roaming charges or hidden fees.

Keep Your Physical SIM: Retain your local SIM card to continue receiving calls while using your eSIM.

Quick Installation: Easily purchase and set up your eSIM in just a few minutes.

What is eSIM?

eSIM (embedded SIM) is the future of mobile connectivity. Unlike traditional physical SIM cards, eSIM is a built-in digital SIM card that's already integrated into your device. This means no more fiddling with tiny SIM cards or worrying about losing them while traveling or worrying about losing them while traveling.

How it works?

With eSIM, simply download your eSIM profile in seconds, and you're instantly connected to global networks. It's incredibly flexible—allowing you to switch between operators instantly, choose the best data plans, and manage everything directly from your smartphone. Whether you're traveling for business or leisure, eSIM ensures you're always online, hassle-free.
